

# Principles of Modern Radar, Volume 1: Basic Principles

## Chapter 1. Introduction and Radar Overview

- 1.1 Introduction
- 1.2 The Radar Concept
  - 1.2.1 Subsystems introduced
- 1.3 The Physics of EM Waves
  - 1.3.1 Wavelength, Frequency, Phase, and superposition (interference)
  - 1.3.2 Intensity
  - 1.3.3 Polarization
- 1.4 Interaction of EM Waves with Matter
  - 1.4.1 Diffraction, and Antenna Diffraction
  - 1.4.2 Attenuation
  - 1.4.3 Refraction
  - 1.4.4 Reflection
- 1.5 Basic Radar Configurations and Waveforms
  - 1.5.1 Bistatic/Monostatic
  - 1.5.2 CW/Pulsed
  - 1.5.3 Coherent/Non-coherent
- 1.6 Noise, SNR, and Detection
- 1.7 Basic Radar Measurements
  - 1.7.1 Target Position
  - 1.7.2 Target Doppler
  - 1.7.3 Polarization
  - 1.7.4 Radar Resolution
- 1.8 Basic Radar Functions
  - 1.8.1 Search
  - 1.8.2 Track
  - 1.8.3 Imaging
- 1.9 Radar Applications
  - 1.9.1 Military Applications
  - 1.9.2 Commercial Applications
- 1.10 Organization of This text
- 1.11 Further Reading
- 1.12 References
- 1.13 Problems

## Chapter 2. The Radar Range Equation

- 2.1 Introduction
- 2.2 Power Density at Distance R
- 2.3 Power Received From a Target
- 2.4 Receiver Thermal Noise
- 2.5 Signal-to-Noise Ratio and the Radar Range Equation
- 2.6 Multiple Pulse Effects
- 2.7 Summary of Losses
  - 2.7.1 Transmit loss
  - 2.7.2 Atmospheric Loss
  - 2.7.3 Receive loss
  - 2.7.4 Signal Processing Loss
- 2.8 Solving for other Variables
- 2.9 Decibel Form of the Radar Range Equation
- 2.10 The Average Power Form of the Radar Range Equation
- 2.11 Pulse Compression – Intrapulse Modulation
- 2.12 A Graphical Example
- 2.13 Extended Clutter as the Target
  - 2.13.1 Surface clutter
  - 2.13.2 Volume clutter
- 2.14 One-Way Link Equation
- 2.15 Search Form of the Radar Range Equation
- 2.16 Track Form of the Radar Range Equation
- 2.17 Some Implications of the Radar Range Equation
  - 2.17.1 Average Power and Dwell Time
- 2.18 Further Reading
- 2.19 References
- 2.20 Problems

## Chapter 3. Radar Search and Overview of Detection in Interference

- 3.1 Introduction
- 3.2 Search Mode Fundamentals
  - 3.2.1 Search Volume
  - 3.2.2 Total Search Time
  - 3.2.3 Electronically Scanned Antenna Issues
  - 3.2.4 Search Regimens
    - 3.2.4.1 Track-While-Scan
    - 3.2.4.2 Search and Track

- 3.2.4.3 Hybrid Search and Track Systems
- 3.3 Overview of Detection Fundamentals
  - 3.3.1 Overview of the Threshold Detection Concept
  - 3.3.2 Probabilities of False Alarm and Detection
  - 3.3.3 Noise PDF and False Alarms
    - 3.3.3.1 Probability of False Alarm
    - 3.3.3.2 False Alarm Rate
  - 3.3.4. Signal Plus Noise PDF – Target Detection
  - 3.3.5. Receiver Operating Curves
  - 3.3.6. Fluctuating Targets
  - 3.3.7. Interference Other Than Noise
  - 3.3.8. Some Closed-Form Solutions
    - 3.3.8.1 Approximate Detection Results for a Non-fluctuating Target
    - 3.3.8.2 Swerling 1 Target Model
  - 3.3.9 Confirmation processing
  - 3.3.10. Multiple Dwell Detection Principles – Cumulative PD
  - 3.3.11. m out of n Detection Criterion
- 3.4 Further Reading
- 3.5 References Chapter
- 3.6 Problems

## Chapter 4. Propagation Effects and Mechanisms

- 4.1 Introduction
- 4.2 Propagation Factor
- 4.3 Propagation Paths and Regions
  - 4.3.1 Monostatic and Bistatic Propagation
  - 4.3.2 The Surface
  - 4.3.3 The Atmosphere
- 4.4 Atmospheric Attenuation and Absorption
  - 4.4.1 Clear Air Water Vapor
  - 4.4.2 Rain
  - 4.4.3 Fog
  - 4.4.4 Snow and Hail
  - 4.4.5 Dust
  - 4.4.6 Smoke
- 4.5 Atmospheric Refraction
  - 4.5.1 Standard Refraction
    - 4.5.1.1 The Standard Atmosphere
    - 4.5.1.2 Defining the Horizon-the Effective Model
  - 4.5.2 Anomalous Refraction
- 4.6 Turbulence
- 4.7 Exploiting the Ionosphere
- 4.8 Diffraction
- 4.9 Multipath
  - 4.9.1 Propagation Paths and Superposition
  - 4.9.2 Describing the Reflecting Surface
  - 4.9.3 The Multipath Reflection Coefficient
    - 4.9.3.1 Fresnel Reflection Coefficients
    - 4.9.3.2 Divergence Factor
    - 4.9.3.3 Roughness Factors
      - 4.9.3.3.1 Specular Scattering
      - 4.9.3.3.2 Diffuse Scattering
    - 4.9.3.4 Angle Error
    - 4.9.3.5 Classification Error
- 4.10 Skin Depth / Penetration – Transmitting Through Walls
- 4.11 Commercial Simulations
- 4.12 Summary and Further Reading
- 4.13 References Chapter
- 4.14 Problems

## 5. Characteristics of Clutter

- 5.1 Introduction and Definitions
  - 5.1.1 What is Clutter?
  - 5.1.2 Comparison of Clutter and Noise
  - 5.1.3 Basic Definitions
    - 5.1.3.1 Scattering Coefficients
    - 5.1.3.2 Clutter Polarization Scattering Matrix
- 5.2 General Characteristics of Clutter
  - 5.2.1 Overview
  - 5.2.2 Surface Clutter
    - 5.2.2.1 General Dependencies
    - 5.2.2.2 Average Value Data
      - 5.2.2.2.1 Land Reflectivity

- 5.2.2.2 Sea Reflectivity
- 5.2.2.3 Clutter Variability Properties
  - 5.2.2.3.1 Land Clutter Variations
    - 5.2.2.3.1.1 Temporal Variations
    - 5.2.2.3.1.2 Spatial Variations
  - 5.2.2.3.2 Sea Clutter Variation
    - 5.2.2.3.2.1 Temporal Variations
    - 5.2.2.3.2.2 Spatial Variations
- 5.2.3 Atmospheric Clutter
  - 5.2.3.1 Average Value Data
    - 5.2.3.1.1 Rain Reflectivity Average Values
    - 5.2.3.1.2 Frozen Precipitation
  - 5.2.3.2 Temporal Spectra
- 5.2.4 Millimeter Wave Clutter
- 5.3 Clutter Modeling
  - 5.3.1 General Approaches for Estimating Detection Performance in Clutter
  - 5.3.2 Clutter Models
    - 5.3.2.1 Surface Clutter
    - 5.3.2.2 Atmospheric Clutter Models
- 5.4 Concluding Remarks
  - 5.4.1 Reflectivity Summary
  - 5.4.2 Clutter Effect on Detection
- 5.5 Recommended Reading
- 5.6 References
- 5.7 Problems

## Chapter 6. Target Reflectivity

- 6.1 Introduction
- 6.2 Basic Reflection Physics
  - 6.2.1 Electromagnetic Wave Fundamentals
  - 6.2.2 Electromagnetic Wave Polarization
  - 6.2.3 Electromagnetic Wave Reflection
- 6.3 Radar Cross Section Definition
  - 6.3.1 IEEE RCS Definition
  - 6.3.2 Intuitive Derivation for Scattering Cross Section
  - 6.3.3 Polarization Scattering Matrix
- 6.4 Three Scattering Regimes
  - 6.4.1 Rayleigh Region Dipole Scattering
  - 6.4.2 Resonant Region Scattering
  - 6.4.3 High-Frequency Optics Region
- 6.5 High Frequency Scattering
  - 6.5.1 Phase Addition
  - 6.5.2 Specular Scattering
  - 6.5.3 End Region Scattering
  - 6.5.4 Edge Diffraction
  - 6.5.5 Multiple Bounce Scattering
- 6.6 Examples
- 6.7 References
- 6.8 Further Reading
- 6.9 Problems

## Chapter 7. Target Fluctuation Models

- 7.1 Introduction
- 7.2 Radar Cross Section for Simple Targets
  - 7.2.1 Basic Scatterers
  - 7.2.2 Aspect Angle and Frequency Dependence of RCS
- 7.3 Radar Cross Section of Complex Targets
- 7.4 Statistical Characteristics of the RCS of Complex Targets
  - 7.4.1 RCS Distributions
  - 7.4.2 RCS Correlation Properties
- 7.5 Target Fluctuation Models
  - 7.5.1 Swerling Models
  - 7.5.2 Extended Models of Target RCS Statistics
- 7.6 Doppler Spectrum of Fluctuating Targets
- 7.7 Further Reading
- 7.8 References
- 7.9 Problems

## Chapter 8. Doppler Phenomenology and Data Acquisition

- 8.1 Introduction
- 8.2 Doppler Shift
- 8.3 The Fourier Transform
- 8.4 Spectrum of a Pulsed Radar Signal
  - 8.4.1 Spectrum of a Continuous Wave Signal
  - 8.4.2 Spectrum of a Single Rectangular Pulse
  - 8.4.3 Infinite Pulse Train
  - 8.4.4 Finite Pulse Train

- 8.4.5 Modulated Finite Pulse Train
- 8.4.6 Pulsed Waveform Spectrum with Moving Targets
- 8.4.7 Doppler Resolution
- 8.4.8 Receiver Bandwidth Effects
- 8.5 Why Multiple Pulses?
- 8.6 Pulsed Radar Data Acquisition
  - 8.6.1 Video Detectors and Phase Shift
  - 8.6.2 Coherent Detector
  - 8.6.3 Pulsed Radar Data Matrix and Datacube
- 8.7 Doppler Signal Model
  - 8.7.1 Measuring Doppler with Multiple Pulses
  - 8.7.2 Coherent Pulses
- 8.8 Range-Doppler Spectrum for a Stationary Radar
  - 8.8.1 Elements of the Doppler Spectrum
  - 8.8.2 Range-Doppler Spectrum
- 8.9 Range-Doppler Spectrum for Moving Radar
  - 8.9.1 Clutter Spreading
  - 8.9.2 Clutter Spectrum Elements
  - 8.9.3 Range-Doppler Clutter Distribution
  - 8.9.4 Range and Velocity Ambiguity Effects
- 8.10 Further Reading
- 8.11 References
- 8.12 Problems

## Chapter 9. Radar Antennas

- 9.1 Introduction
- 9.2 Basic Antenna Concepts
  - 9.2.1 The Isotropic Antenna
  - 9.2.2 The Radiation Pattern
  - 9.2.3 Beamwidth
  - 9.2.4 Directivity and Gain
  - 9.2.5 Sidelobes
- 9.3 Aperture Tapers
- 9.4 Effect of the Antenna on Radar Performance
- 9.5 Monopulse
- 9.6 Reflector Antennas
- 9.7 Phased Array Antennas
  - 9.7.1 The Array Factor
  - 9.7.2 Phase Shifters
  - 9.7.3 Grating Lobes
  - 9.7.4 Gain Loss
  - 9.7.5 The Array Element
  - 9.7.6 Wideband Phased Arrays
- 9.8 Array Architectures
  - 9.8.1 Passive Array Architecture
  - 9.8.2 Active Array Architecture
  - 9.8.3 Subarray Architecture
- 9.9 Further Reading
- 9.10 References
- 9.11 Questions

## Chapter 10. Radar Transmitters

- 10.1 Introduction
- 10.2 Transmitter Configurations
- 10.3 Types of Power Sources
  - 10.3.1 Oscillators
    - 10.3.1.1 Gunn Diode Oscillators
    - 10.3.1.2 IMPATT diode oscillators
    - 10.3.1.3 Magnetron Oscillators
  - 10.3.2 Amplifiers
    - 10.3.2.1 Crossed Field Amplifiers
    - 10.3.2.2 Traveling-wave Tubes
    - 10.3.2.3 Klystrons
    - 10.3.2.4 Solid-state Transmit/Receive Modules
    - 10.3.2.5 Microwave Power Modules
    - 10.3.2.6 Summary of Microwave Source Power Levels
- 10.4 Modulators and Power Supplies
  - 10.4.1 Line Type Modulators
  - 10.4.2 Hard Tube Modulators
  - 10.4.3 High Voltage Power Supplies
  - 10.4.4 Power Supplies for Solid-State Phased Arrays
- 10.5 Transmitter Reliability
- 10.6 Transmitter Impacts on Spectral Purity
  - 10.6.1 Time Varying Errors
  - 10.6.2 Non-Time Varying Errors
- 10.7 Further Reading

- 10.8 References
- 10.9 Problems

## Chapter 11. Radar Receivers

- 11.1 Introduction
- 11.2 Summary of Receiver Types
  - 11.2.1 Crystal Video Receiver
  - 11.2.2 Superregenerative Receivers
  - 11.2.3 Homodyne Receivers
  - 11.2.4 Superheterodyne Receivers
  - 11.2.5 Digital Receivers
  - 11.2.6 Instantaneous Frequency Measurement Receivers
  - 11.2.7 Channelized Receivers
- 11.3 Major Receiver Functions
  - 11.3.1 Receiver Protection
  - 11.3.2 IF Preselection
  - 11.3.3 Frequency Downconversion and Mixers
  - 11.3.4 Selection of LO and IF Frequencies
- 11.4 Demodulation
  - 11.4.1 Non-Coherent Demodulation
  - 11.4.2 Coherent Demodulation
  - 11.4.3 Analog Coherent Detection Implementation & Mismatch Errors
- 11.5 Receiver Noise Power
- 11.6 Receiver Dynamic Range
  - 11.6.1 Sensitivity Time Control
  - 11.6.2 Gain Control
  - 11.6.3 Coupling issues
- 11.7 Analog to Digital Data Conversion
  - 11.7.1 Spurious Free Dynamic Range
  - 11.7.2 Direct Digital Coherent Detection Implementation
  - 11.7.2 Digital UP/DOWN Frequency Conversion
- 11.8 Further Reading
- 11.9 References
- 11.10 Problems

## Chapter 12. Radar Exciters

- 12.1 Introduction
- 12.2 Exciter-related Radar Performance Issues
  - 12.2.1 Phase Noise Issues
  - 12.2.2 Effect of Phase Noise on Clutter Reduction - MTI Processing
  - 12.2.3 Effect of Phase Noise on Pulse-Doppler Processing
  - 12.2.4 Effect of Phase Noise on Imaging
- 12.3 Exciter Design Considerations
  - 12.3.1 Transmit Signal
  - 12.3.2 Waveform Generation
    - 12.3.2.1 Intra-pulse, Pseudorandom Biphase Modulation
    - 12.3.2.2 Intra-pulse Linear Frequency Modulation (LFM)
    - 12.3.2.3 Dwell-to-Dwell Frequency Change
- 12.4 Exciter Components
  - 12.4.1 Stable Oscillators - Oscillator Technology
    - 12.4.1.1 Crystal Reference Oscillator
    - 12.4.1.2 Stable Local Oscillator
    - 12.4.1.3 Phase-locked Oscillators for Stable Local Oscillators
    - 12.4.1.4. Surface Acoustic Wave Oscillators
  - 12.4.2 Synthesizers
  - 12.4.3 Other devices
    - 12.4.3.1 Assembly approaches
    - 12.4.3.2 Mixers
    - 12.4.3.3 Switches
    - 12.4.3.4 Frequency Multipliers
    - 12.4.3.5 Frequency Dividers
    - 12.4.3.6 Amplifiers
- 12.5 Timing and Control Circuits
- 12.6 Further Reading
- 12.7 References
- 12.8 Problems

## Chapter 13. The Radar Signal Processor

- 13.1 Introduction
- 13.2 Radar Processor Structure
- 13.3 Signal Processor Metrics
  - 13.3.1 Hardware Metrics
  - 13.3.2 Algorithm Metrics
- 13.4 Counting FLOPS: Estimating Algorithm Computational Requirements
  - 13.4.1 General Approach
  - 13.4.2 Mode-Specific Formulas

- 13.4.3 Choosing Efficient Algorithms
- 13.5 Implementation Technology
  - 13.5.1 Analog-to-Digital Conversion
  - 13.5.2 Processor Technologies
  - 13.5.3 COTS Technology and Modular Open Architectures
  - 13.5.4 The Influence of Moore's Law
- 13.6 Fixed Point vs. Floating Point
- 13.7 Signal Processor Sizing
  - 13.7.1 Considerations in Estimating Timing
  - 13.7.2 Benchmarks
  - 13.7.3 Software Tool Impacts
  - 13.7.4 Data Rates
  - 13.7.5 Onboard vs. Offboard Processing
- 13.8 Further Reading
- 13.9 References
- 13.10 Problems

## Chapter 14. Digital Signal Processing Fundamentals for Radar

- 14.1 Introduction
- 14.2 Sampling
  - 14.2.1 The Nyquist Sampling Theorem
  - 14.2.2 Sampling Non-Bandpass Signals
  - 14.2.3 Vector Representation of Sampled Signals
  - 14.2.4 Data Collection and the Radar Datacube
- 14.3 Quantization
- 14.4 Fourier Analysis
  - 14.4.1 The Discrete-Time Fourier Transform
  - 14.4.2 Windowing
  - 14.4.3 Spatial Frequency
  - 14.4.4 The Discrete Fourier Transform (DFT)
  - 14.4.5 Straddle Loss
  - 14.4.6 The Fast Fourier Transform
  - 14.4.7 Summary of Fourier Transform Relationships
- 14.5 The z Transform
- 14.6 Digital Filtering
  - 14.6.1 Spectral Representations of LSI Systems
  - 14.6.2 Digital Filter Characteristics and Design
    - 14.6.2.1 FIR Filters
    - 14.6.2.2 IIR Filters
    - 14.6.2.3 Filter Design Comparison Example
  - 14.6.3 Implementing Digital Filters
  - 14.6.4 Shift-Varying and Nonlinear Systems
- 14.7 Random Signals
  - 14.7.1 Probability Density Functions
  - 14.7.2 Moments and Power Spectrum
  - 14.7.3 White Noise
  - 14.7.4 Time Averages
- 14.8 Integration
  - 14.8.1 Coherent Integration
  - 14.8.2 Noncoherent Integration
- 14.9 Correlation as a Signal Processing Operation
- 14.10 Matched Filters
- 14.11 Further Reading
- 14.12 References
- 14.13 Problems

## Chapter 15. Threshold Detection of Radar Targets

- 15.1 Introduction
- 15.2 Detection Strategies for Multiple Measurements
  - 15.2.1 Dwells and Coherent Processing Intervals
  - 15.2.2 Coherent, Noncoherent, and Binary Integration
  - 15.2.3 Data Combination Strategies
- 15.3 Introduction to Optimal Detection
  - 15.3.1 Hypothesis Testing and the Neyman-Pearson Criterion
  - 15.3.2 The Likelihood Ratio Test
- 15.4 Statistical Models for Noise and Target RCS in Radar
  - 15.4.1 Statistical Model of Noise
  - 15.4.2 Statistical Models of Radar Cross Section for Targets
  - 15.4.3 RCS Decorrelation Properties
  - 15.4.4 Swerling Models
  - 15.4.5 Extended Models of Target RCS Statistics
  - 15.4.6 Statistics of Targets in Interference and the Detection Statistic
- 15.5 Threshold Detection of Radar Signals
  - 15.5.1 Unknown Parameters
  - 15.5.2 The Optimum Detector for Nonfluctuating Radar Signals, N=1
  - 15.5.3 Performance for the Nonfluctuating Signal in Gaussian Noise, N=1

- 15.5.4 Optimum Detector for a Nonfluctuating Target,  $N > 1$
- 15.5.5 Linear and Square-Law Detectors
- 15.5.6 Square Law Detector Performance for a Nonfluctuating Target,  $N > 1$
- 15.5.7 Albersheim's Equation
- 15.5.8 Fluctuating Targets
- 15.5.9 Frequency Agility
- 15.5.10 Shnidman's Equation
- 15.5.11 Detection in Clutter
- 15.5.12 Binary Integration
- 15.6 Further Reading
- 15.7 References
- 15.8 Problems
- Chapter 16. Constant False Alarm Rate Detectors**
  - 16.1 Introduction
  - 16.2 Overview of Detection Theory
  - 16.3 False Alarm Impact and Sensitivity
  - 16.4 CFAR Detectors
    - 16.4.1 Neyman-Pearson Detector
    - 16.4.2. Basic CFAR Architecture
  - 16.5 Cell Averaging CFAR
    - 16.5.1 CA-CFAR Performance
      - 16.5.1.1 Homogeneous Performance
      - 16.5.1.2. CFAR Loss
    - 16.5.2 CA-CFAR Performance in Heterogeneous Environments
      - 16.5.2.1 Masking
      - 16.5.2.2 Clutter Boundaries
  - 16.6 Robust CFARs
    - 16.6.1 Greatest-of CA-CFAR
    - 16.6.2 Suppression of Mutual Target Masking
      - 16.6.2.1. Smallest-of CA-CFAR
      - 16.6.2.2. Trimmed Mean or Censored CFAR
      - 16.6.2.3. Ordered Statistics CFAR
      - 16.6.2.4. CS and OS-CFAR Numerical Example
    - 16.6.3 Combining GO with CS or OS
  - 16.7. Algorithm Comparison
  - 16.8. Adaptive CFARs
  - 16.9. Additional Comments
    - 16.9.1 Non-Rayleigh Backgrounds
    - 16.9.2 Clutter Map CFAR
  - 16.10 Further Reading
  - 16.11 References
  - 16.12 Problems
- Chapter 17. Doppler Processing**
  - 17.1 Introduction
  - 17.2 Review of Doppler Shift and Pulsed Radar Data
    - 17.2.1 Doppler Shift
  - 17.3 Pulsed Radar Doppler Data Acquisition and Characteristics
    - 17.3.1 Review of Pulsed Radar Data Matrix and Doppler Signal Model
    - 17.3.2 Generic Doppler Spectrum for a Single Range Bin
    - 17.3.3 Review of Range and Velocity Aliasing and Coverage
  - 17.4 Moving Target Indication
    - 17.4.1 Pulse Cancellers
    - 17.4.2 Blind Speeds and Staggered PRFs
    - 17.4.3 MTI Figures of Merit
    - 17.4.4 Limitations to MTI Performance
    - 17.4.5 MTI from a Moving Platform
  - 17.5 Pulse Doppler Processing
    - 17.5.1 The Discrete Time Fourier Transform of a Constant-Velocity Target
    - 17.5.2 Sampling the Doppler Spectrum and Straddle Loss
    - 17.5.3 Signal-to-Noise Ratio in the Doppler Spectrum
    - 17.5.4 Matched Filter and Filterbank Interpretations of Pulse Doppler Processing with the DFT
    - 17.5.5 Fine Doppler Estimation
    - 17.5.6 Modern Spectral Estimation in Pulse Doppler Processing
    - 17.5.7 Metrics for Pulse Doppler Detection of Moving Targets
    - 17.5.8 Dwell-to-Dwell Stagger
    - 17.5.9 Blind Zones
    - 17.5.10 PRF Regimes and Ambiguity Resolution
    - 17.5.11 Transient Effects
  - 17.6 Clutter Mapping and the Moving Target Detector
    - 17.6.1 Clutter Mapping
  - 17.7 Pulse Pair Processing

- 17.8 Further Reading
- 17.9 References
- 17.10 Problems
- Chapter 18. Radar Measurements**
  - 18.1 Introduction
  - 18.2 Resolution, Accuracy, and Precision in Radar Measurements
    - 18.2.1 Precision and Accuracy
    - 18.2.2 Accuracy and Performance Considerations
  - 18.3 Radar Signal Model
  - 18.4 Parameter Estimation
    - 18.4.1 Estimators
    - 18.4.2 The Cramer-Rao Lower Bound
    - 18.4.3 Precision and Resolution for the Gaussian Case
    - 18.4.4 Signal and Target Variability
  - 18.5 Range Measurements
    - 18.5.1 Resolution and Sampling
    - 18.5.2 Split-Gate Range Measurement Precision
  - 18.6 Phase Measurements
  - 18.7 Doppler and Range Rate Measurements
    - 18.7.1 DFT Methods
    - 18.7.2 DFT Interpolation Methods
    - 18.7.3 Pulse-Pair Estimation
  - 18.8 RCS Estimation
  - 18.9 Angle Measurements
    - 18.9.1 Angle Centroiding for Scanning Radars
    - 18.9.2 Monopulse
      - 18.9.2.1 Single Target
      - 18.9.2.2 Multiple Unresolved Targets
  - 18.10 Coordinate Systems
  - 18.11 A Preview of Tracking
    - 18.11.1 The  $\alpha$ - $\beta$  Filter
    - 18.11.2 State Space Representation of the  $\alpha$ - $\beta$  Filter
  - 18.12 Further Reading
  - 18.13 References
  - 18.14 Problems
- Chapter 19. Tracking Radar Targets**
  - 19.1 Introduction
  - 19.2 Basics of Track Filtering
    - 19.2.1 Parametric Estimation
      - 19.2.1.1 Constant Velocity Filtering
      - 19.2.1.2 Constant Acceleration Filtering
    - 19.2.2 Stochastic State Estimation
      - 19.2.2.1 Nearly Constant Velocity Filtering with Discrete White Noise Acceleration
      - 19.2.2.2 Nearly Constant Velocity Tracking with LFM Waveforms
      - 19.2.2.3 Nearly Constant Velocity Filtering with Continuous White Noise Acceleration
      - 19.2.2.4 Nearly Constant Acceleration Filtering
      - 19.2.2.5 Multiple Model Filtering for Highly Maneuvering Targets
  - 19.3 Kinematic Motion Models
    - 19.3.1 Nearly Constant Velocity Motion Motion
    - 19.3.2 Nearly Constant Acceleration Motion Model
    - 19.3.3 Singer Motion Model
    - 19.3.4 Nearly Constant Speed Motion Model
  - 19.4 Measurement Models
    - 19.4.1 Measurements in Stabilized Coordinates
    - 19.4.2 Measurements in Sine Space
    - 19.4.3 Measurements with LFM Waveforms
    - 19.4.4 Surveillance Radars with Measurements of Reduced Dimension
  - 19.5 Radar Track Filtering
    - 19.5.1 Nonlinear Least-Squares Estimation
    - 19.5.2 Extended Kalman Filter
    - 19.5.3 Converted Measurement Filter
  - 19.6 Measurement-to-track Data Association
    - 19.6.1 Measurement Validation and Gating
    - 19.6.2 Nearest Neighbor Filter
    - 19.6.3 Strongest Neighbor Filter
    - 19.6.4 Probabilistic Data Association Filter (PDAF)
  - 19.7 Performance Assessment of Tracking Algorithms
  - 19.8 Further Reading
  - 19.9 Problems
- Chapter 20. Fundamentals of Pulse Compression Waveforms**
  - 20.1 Introduction
  - 20.2 Matched Filters
    - 20.2.1 Relevance of SNR to Radar Performance

- 20.2.2 Energy Form of the Radar Range Equation
- 20.2.3 The Form of the Matched Filter
- 20.2.4 Point Target Model
- 20.2.5 Match Filtered Response Proportional to Waveform Energy
- 20.2.6 Fourier Relationships and the Matched Filter
- 20.2.7 Derivation of the Matched Filter
- 20.2.8 The Radar Range Equation and Matched Filter Relationship
- 20.2.9. The Match Filtered Response for a Simple Pulse
- 20.2.10 Properties of the Match Filtered Response
- 20.3 Range Resolution
  - 20.3.1 Resolution as Defined by the Rayleigh Criterion
  - 20.3.2 Resolution Defined in Terms of Mainlobe Width
  - 20.3.3 Resolution Defined in Terms of a Second Order Moment
  - 20.3.4 The Relationship Between Bandwidth and Range Resolution
  - 20.3.5 An Examination of Resolution Using 2 Point Targets
- 20.4 Straddle Loss
- 20.5 Pulse Compression Waveforms
  - 20.5.1 Amplitude Modulation
  - 20.5.2 Frequency Modulation
  - 20.5.3 Phase Coded Waveforms
- 20.6 Pulse Compression Gain
- 20.7 Linear Frequency Modulated Waveforms
  - 20.7.1 Time Domain Description of an LFM Waveform
  - 20.7.2 Waveform Spectrum
  - 20.7.3 Compressed Response Waveform Spectrum
  - 20.7.4 Rayleigh Resolution
  - 20.7.5 The Nominal Sidelobe Response
- 20.8 Matched Filter Implementations
  - 20.8.1 Dispersive Filters
  - 20.8.2. Digital Filters
- 20.9 Sidelobe Reduction in an LFM Waveform
  - 20.9.1 Weighting and Time-Bandwidth Requirements
  - 20.9.2 Straddle Loss Reduction
- 20.10 Ambiguity Functions
  - 20.10.1 Ambiguity Function for a Simple Pulse
  - 20.10.2 Ambiguity Function for an LFM Waveform
  - 20.10.3 Range-Doppler Coupling
  - 20.10.4 Spectral Interpretation of Range-Doppler Coupling
  - 20.10.5 Dealing with Doppler Modulation in a Pulse Compression Waveform
  - 20.10.6 The V-LFM
- 20.11 LFM Summary
- 20.12 Phase Coded Waveforms
  - 20.12.1 The Structure and General Properties of Phase Coded Waveforms
  - 20.12.2 Phase Codes Used in Radar
  - 20.12.3 Phase Modulation
  - 20.12.4 Equivalence Operations
  - 20.12.5 Match Filtered Response of a Phase Code
  - 20.12.6 Spectrum of a Phase Coded Waveform
  - 20.12.7 Doppler Tolerance
- 20.13 Biphase Codes
  - 20.13.1 Biphase Barker Codes
  - 20.13.2 MPS codes
  - 20.13.3 Maximal Length Sequences
  - 20.13.4 Comparison of MLS and LFM Waveform Responses and Spectra
- 20.14 Polyphase Codes
  - 20.14.1 Polyphase Barker Codes
  - 20.14.2 Frank, P1, and P2 Codes
  - 20.14.3 P3 & P4 Codes
- 20.15 Phase Code Summary
- 20.16 Further Reading
- 20.17 References
- 20.18 Problems

- 21.5.1 SAR Coordinate Systems
- 21.5.2 Linear Collection PSR
- 21.5.3 DBS Derivation
- 21.5.4 DBS Image Formation
- 21.5.5 DBS, Doppler, and the PSR
- 21.5.6 DBS Example
- 21.5.7 DBS Limitations
- 21.5.8 Matched Filter Imaging
- 21.5.9 Image Formation Survey
- 21.6 Image Phenomenology
  - 21.6.1 No Return Areas
  - 21.6.2 Shadowing
  - 21.6.3 Foreshortening and Layover
  - 21.6.4 Speckle
  - 21.6.5 Man-Made Returns
  - 21.6.6 Signal-to-Noise and Clutter-to-Noise Ratios
- 21.7 Summary
- 21.8 Further Reading
- 21.9 References
- 21.10 Problems

## Chapter 21. An Overview of Radar Imaging

- 21.1 Introduction
- 21.2 General Imaging Considerations
  - 21.2.1 SAR as a Large Synthetic Antenna Aperture
  - 21.2.2 SAR as Range-Doppler Imaging
  - 21.2.3 SAR as a Signal Processing Exercise
- 21.3 Resolution Relationships and Sampling Requirements
  - 21.3.1 Resolution Relationships
  - 21.3.2 Synthetic Aperture Sampling Requirements
  - 21.3.3 Miscellaneous Relationships
- 21.4 Data Collection
- 21.5 Image Formation
